

# BW Sahara Sky Hotel

bwsaharaskyhotel.com · September 2026 · 16 issues identified (4 critical)

SECTION A

Frontend & Logic Bugs

8 issues

1 Currency Switcher Dropdown Is Broken

CRITICAL

UI BUG

Header > USD Currency Button

PROBLEM

Clicking the currency switcher button updates the DOM attribute, but no dropdown menu opens — no alternative currencies are presented to the user.

IMPACT

Guests cannot view room prices in their preferred currency, leading to confusion and potential booking abandonment.

2 Booking Bar Data Not Passed to External Engine

CRITICAL

LOGIC BUG

Main Search Bar > Book Now Button

PROBLEM

When guests select check-in/check-out dates and guest count then press search, none of this data is appended to the booking engine URL — the external system always loads with today's default dates.

IMPACT

Guests are forced to re-enter all booking details from scratch, causing significant friction and a high drop-off rate.

3 Services Navigation Link Missing from Arabic Version

CRITICAL

I18N BUG

Header > Main Navigation (/ar)

PROBLEM

The 'Services' navigation link exists in the English and Chinese versions but is completely absent from the Arabic navigation menu.

IMPACT

Arabic-speaking visitors have no way to discover or access the hotel services page via the main navigation.

4 Footer 'Our Services' Column Duplicates Quick Links

MEDIUM

UX / CONTENT

Footer > Our Services Column

PROBLEM

The links listed under 'Our Services' are identical to the 'Quick Links' column — no actual hotel services (safari, restaurants, spa, pool, etc.) are linked from this section.

IMPACT

Creates a confusing and unprofessional footer layout that wastes prime real estate for service discovery.

5

## Floating Contact Buttons Show Arabic Tooltips on English Site

MEDIUM

I18N BUG

*Floating WhatsApp / Phone Buttons*

### PROBLEM

The title/tooltip attributes on floating contact buttons remain in Arabic even when the site language is switched to English or any other language.

### IMPACT

Poor and confusing experience for international guests; signals incomplete localization work.

6

## Gallery Filter Tabs Overflow Off-Screen on Mobile

MEDIUM

MOBILE RESPONSIVE

*Gallery Page (375px Viewport)*

### PROBLEM

Photo filter tabs do not collapse into a dropdown or become horizontally scrollable on small screens — they overflow off the right edge of the screen with no way to access hidden tabs.

### IMPACT

Guests cannot access all gallery categories on mobile, hiding important visual content from them.

7

## Footer Columns Disorganized on Mobile Screens

MEDIUM

MOBILE RESPONSIVE

*Site Footer (375px Viewport)*

### PROBLEM

The four footer columns do not stack into a clean single-column layout on mobile, and floating social media icons overlap with copyright text and footer links.

### IMPACT

Footer becomes unreadable on mobile — users cannot access important links or contact information.

8

## Room Size Displayed as Square Feet Instead of Square Meters

CRITICAL

CONTENT ERROR

*External Booking Engine (be.aiosell.com)*

### PROBLEM

Room size is displayed as '35 square feet' (equivalent to only 3.2 m<sup>2</sup>) instead of the correct '35 square meters' — a critical data error that completely misleads guests.

### IMPACT

Misleading room dimensions damage trust and directly reduce booking conversions.

## SECTION B

## UI/UX Design Issues

8 issues

9

## Hotel Name in Hero Banner Written in Unprofessional All-Lowercase

MEDIUM

TYPOGRAPHY

Homepage > Hero Banner

### PROBLEM

The hotel name 'BW sahara sky hotel' appears entirely in lowercase in the most prominent heading on the site. This violates standard typography conventions for brand names; it should be Title Case: 'BW Sahara Sky Hotel'.

### IMPACT

Creates an immediately unprofessional first impression — the brand appears unpolished and careless to first-time visitors.

10

## Primary CTA Button Has Low Visibility Due to Transparent Outline Style

MEDIUM

VISUAL CONTRAST

Homepage > Hero Banner Section

### PROBLEM

The main 'Discover Now' CTA uses a transparent outline style placed over a changing background image, so it visually blends into the background and fails to draw the user's eye.

### IMPACT

The most critical conversion button on the entire site fails to capture attention, directly reducing click-through rates.

11

## Weak Typography Hierarchy — Headings Not Visually Differentiated

MEDIUM

TYPOGRAPHY  
HIERARCHY

Homepage > 'Explore' Discovery Section

### PROBLEM

The main headline is disproportionately large compared to subheadings and body text, with insufficient font-weight differentiation across hierarchy levels, so the eye struggles to find a natural entry point and reading path.

### IMPACT

Difficult and disorienting reading experience — key marketing messages lose impact when the visual hierarchy fails to guide the reader.

12

## Room Cards Display English Names on the Arabic-Language Site

MEDIUM

LOCALIZATION /  
CONTENT

Rooms Page > Room Cards

### PROBLEM

Room names display in English ('B&W; SAHARA SKY Hotel Superior Room') while all surrounding page content is in Arabic, creating a visually jarring mismatch.

### IMPACT

Undermines the quality of localization; makes the Arabic version appear half-finished and unprofessional.

13

### Gallery Filter Tabs Mix Arabic and English Labels in the Same Bar

MEDIUM

LOCALIZATION /  
CONSISTENCY

Gallery Page › Image Filter Bar

#### PROBLEM

The gallery filter bar combines one Arabic label with four English labels in the same row, signalling incomplete translation work and breaking visual consistency.

#### IMPACT

The language inconsistency disrupts user trust and signals unprofessional execution to Arabic-speaking visitors.

14

### Blog Page Sidebar Positioned Incorrectly for RTL Arabic Layout

MEDIUM

RTL LAYOUT

Blog Page › Overall Page Layout

#### PROBLEM

In RTL (right-to-left) Arabic reading, the sidebar should appear on the left with main content on the right; the current design keeps an LTR sidebar-on-right layout.

#### IMPACT

Creates a disorienting reading experience for Arabic users and shows the RTL layout was never properly adapted.

15

### About Us Page Has a Large Unexplained Empty White Section

MEDIUM

VISUAL LAYOUT

About Us Page › Middle Content Section

#### PROBLEM

The 'About Us' page contains a significantly large blank white section in the middle — a vast empty area with no images or text content, suggesting a broken layout or content never populated.

#### IMPACT

The page looks incomplete or broken, wasting a critical opportunity to tell the hotel's story and build guest confidence.

16

### Footer Subscribe Button Displays English Text on the Arabic Site

MEDIUM

LOCALIZATION

Footer › Newsletter Subscription Form

#### PROBLEM

The newsletter subscription button shows 'SUBSCRIBE' in English even when the entire site is in Arabic mode, breaking the visual consistency of the footer.

#### IMPACT

Signals that Arabic users are an afterthought, reducing the overall polish and professionalism of the site.

# Recommended Fix Plan

Each numbered fix corresponds to the matching issue number above.

## Part 1 — Frontend & Logic Fixes (Issues 1–8)

### 1 Currency Switcher

Debug the JavaScript dropdown handler — fix the click event binding to the correct DOM element.

### 2 Booking Data Sync

Pass check-in/out dates and guest count as URL query parameters to the external booking engine.

### 3 Arabic Services Nav Link

Add the Services page link to the Arabic translation dictionary in the CMS navigation settings.

### 4 Footer Service Links

Replace duplicate Quick Links with actual hotel service links (safari, restaurants, spa, etc.).

### 5 Floating Button Tooltips

Bind title attributes to the i18n translation system so they update with the selected language.

### 6 Mobile Gallery Tabs

Convert filter tabs to overflow-x: auto horizontally-scrollable tabs on mobile viewports.

### 7 Mobile Footer Layout

Use a CSS Grid single-column layout for footer columns on screens smaller than 576px.

### 8 Room Size Unit

Correct 'square feet' to 'square meters' in the external booking engine's room data feed.

## Part 2 — UI/UX Design Fixes (Issues 9–16)

### 9 Hero Typography

Change the hotel name to Title Case ('BW Sahara Sky Hotel') or apply text-transform: capitalize via CSS.

### 10 Primary CTA Button

Replace the transparent outline style with a solid, semi-opaque background button for stronger contrast.

### 11 Typography Hierarchy

Define a clear text scale: H1 large + bold, H2 medium + semibold, body text smaller + regular.

---

**12 Room Card Localization**

Translate room names to Arabic in the CMS and display the translated names in room cards.

---

**13 Gallery Filter Labels**

Translate all gallery filter tab labels to Arabic; eliminate the Arabic/English mix.

---

**14 Blog RTL Sidebar Layout**

Move the sidebar to the left in the Arabic (RTL) version using flex-direction: row-reverse or CSS logical properties.

---

**15 About Us Empty Section**

Fill the blank section with additional content: hotel stats, timeline, or guest testimonials.

---

**16 Footer Subscribe Button**

Translate 'SUBSCRIBE' for each language and connect it to the i18n translation system.

---
